

PROGRAMMING

VOL - 1

TABLE OF CONTENTS

**Getting Started
with C Language**

**Character classification
& conversion**

**Aliasing & effective
type**

Assertion

Bit-fields

Boolean

**Command-line
arguments**

Comments

**Common C Programming
idioms and
developer practices**

Common pitfalls

**Getting Started
with C Language**

**Character classification
& conversion**

**Aliasing & effective
type**

Assertion

Bit-fields

Boolean

**Command-line
arguments**

Comments

**Common C Programming
idioms and
developer practices**

Common pitfalls

Compilation

Compound Literals

**Create and include
header files**

Data Types

**Declaration
vs Definition**

Declarations

**Preprocessor and
Macros**

Enumerations

Error handling

Files and I/O streams

Formatted Input/Output

Function Parameters

Arrays

Function Pointers

**Literals for numbers,
characters and strings**

Generic Selection

Selection Statements

Identifier Scope

Sequence points

**Implicit and Explicit
Conversions**

Error handling

Files and I/O streams

Formatted Input/Output

Function Parameters

Arrays

Function Pointers

PROGRAMMING

VOL - 2

TABLE OF CONTENTS

Inlining

**Interprocess
Communication**

**Iteration Statements/Loops:
for, while, do-while**

Jump Statements

Linked lists

Memory Management

**Multi-Character
Character Sequence**

Multithreading

Operators

**Pass 2D-arrays to
functions**

Pointers

**Random Number
Generation**

Standard Math

Storage Classes

**Structure Padding
and Packing**

Testing frameworks

Side Effects

Signal handling

Strings

Structs

Threads (native)

Type Qualifiers

Typedef

Undefined behaviour

Unions

Valgrind

Variable arguments

X-macros
